

## **Cosmetic Bonding and Composite Veneers**

Cosmetic Bonding and Composite Veneers are painless, affordable cosmetic dental treatments which can treat a variety of issues to help you achieve a brighter, whiter, more confident smile. They can be used to treat and improve the appearance of:

- ∂ Minor damage
- ∂ Tooth surface cracks
- ∂ Chips
- ∂ Tooth wear
- ∂ Discolouration
- ∂ Gaps
- ∂ Change the shape of the tooth
- ∂ Smooth uneven surfaces

The difference between Cosmetic Bonding and Composite Veneers is the amount of tooth surface they cover. A Cosmetic Bond will only cover part of the tooth surface whereas a Composite Veneer will cover the whole front surface and edge of the tooth like a false nail. A combination of these can be used to achieve the smile you would like depending on what each tooth requires. They are also a much less invasive treatment to improve your smile than traditional Crowns and Veneers which require much more preparation of the tooth surface involving removal of tooth tissue.

### ***Process***

After the diagnostic and planning stages have been completed, Cosmetic bonding and Composite veneers can usually be carried out in a single appointment and achieves an instant result. During the appointment your tooth surfaces may be roughened lightly and a tooth coloured resin (composite) applied and shaped. Once the Clinician is happy this is then set with a blue light which hardens the material meaning you are able to smile, eat and drink as soon as you leave the practice.

Prior to treatment you would require a consultation to ensure that you are suitable for treatment and provide you with a full written estimate. Composite bonding and veneers are often used in conjunction with tooth whitening and orthodontics (teeth straightening treatments), both of which would need to be completed prior to the cosmetic bonding treatment to ensure we can colour match the material and accurately improve the tooth shape and smile.

### ***Aftercare***

Whilst the properties of the resin material do not last quite as long as porcelain alternatives, the Cosmetic bonding and veneers still last for many years provided you look after them, as with any cosmetic treatments.

- ∂ Ensure regular Dentist and Hygienist visits.
- ∂ Maintain good oral hygiene regime at home (brush twice per day, clean interdentally with floss or interdental brushes.
- ∂ Avoid nail biting or chewing pens which could lead to chipping of the material.
