

Dental Implants

Dental Implants are the most permanent form of tooth replacement available to us. They consist of a titanium post which is placed into the bone securely and can be used to hold a crown, bridge or anchor a denture depending on the patient requirements. This enables them to function as close to a normal tooth as possible allowing you to chew, talk and smile with confidence.

Single Implant Retained Crown

Process

Dental Implants are placed into the jawbone under sterile conditions; this requires a long appointment to ensure we can take our time at every step of the procedure. Once in place the bone attaches itself to the dental implant through a process called Osseointegration. This can take around 3 months. Once the Osseointegration has taken place you will have another appointment to take impressions or a scan for the laboratory to use to make the permanent restoration which will then be fitted.

Implants can be used in various ways and you don't necessarily require one implant per missing tooth.

Technology

At the Dental Spa we pride ourselves in using only the highest quality materials, bone products and techniques and this is reflected in our treatment fees. We use the BTI system for Dental Implants which have over 30 years of research, development and information to produce a very high success rate.

One of the most innovative high quality techniques we have available is the option to use PRGF (Plasma Rich In Growth Factors). This technique can use the patient's own platelets for the stimulation and acceleration of tissue healing and regeneration, meaning it aids quicker and more predictable healing whilst reducing the risk of post operative pain and infection. We also have the option to carry out

guided surgery through the use of specialist computer software and guides which help to aid a predictable result.

The initial step would be to have a consultation with our Implantologist. During the consultation they will assess the health of your teeth, bone and soft tissues to ensure you are suitable for Dental Implants. They will also discuss all options available to you to achieve your goal to enable you to make a fully informed decision about the treatment you wish to have.

Fees

Consultation £60.00 including xrays

CBCT scan (if required) £195.00

PRGF (if required) £150.00

Dental Implant including crown restoration £2600.00

Bone Graft (if required) £500.00
